

**GRO-BARK®**

GRO-BARK (ONTARIO) LTD.

## Gro-Max®

### Gro-Max® Planting Soil

- Well balanced complete soil
- Sustainable blend of composted soil ingredients
- Well-draining soil that resists compaction
- Formulated for optimum root growth and plant health
- High organic matter content, optimum pH, water holding and porosity

**Gro-Max®** can be used for a variety of plants including annuals, perennials, biennials, herbs, vegetables and indoor plants.

### Typical Analysis:

pH: 6.8-8.0

EC: <3.0 mS/cm

Organic Matter Content: 25-35% by weight

Air Porosity: >20%

Total Porosity: >60%

Bulk Density: < 1.4 g/cc

### How to Optimize Results:

As with any soil, it is highly recommended that plants are watered regularly to ensure optimum moisture content. Soil should be moist below the surface.

Organic or synthetic fertilizer should be used to optimize plant growth, especially in vegetable gardens. Fertilizer will supply plants with necessary nutrients to produce healthy plants.

Fruit and vegetable plants are heavy feeders. Increased fertilizer may be required for crop yield. Fertilizer formulated for fruits or vegetables should be used to avoid excessive plant growth and optimum vegetable/fruit production.
